

Horseshoe Hollow

Grass Cutting and Maintenance Plan 2024

- Mowing and baling once per year. Due September 2024.
- Hatched areas not mown and managed as scrub habitat.
- Beck banks under stewardship of the Environment Agency (3 metres each side).
- Footpaths mown weekly (and widened) during high growing season, then fortnightly.
- Access paths to the Beck mown.
- Hedges cut on a four-year rotation (next due 2024).

Grass cuttings are removed after cuts. This limits the nutrient value of the soil and reduces grass vigour. This is already showing effect.
